

The Situation

Stores in our communities play a critical role in our health.

They not only impact the economic well-being of neighborhoods, but also the physical health of the people who visit them. The types of products available, many of which contribute to chronic health issues, and how they're promoted influence us all, but especially our kids.

In 2011, the tobacco industry spent \$605 million¹ advertising and promoting tobacco products in California and our kids are paying the price. Exposure to tobacco marketing in stores increases tobacco experimentation and use by youth² and is more powerful than peer pressure.³

Marketing of unhealthy foods also has a great impact, particularly on kids. They consume more of it, more often because it's promoted heavily to them – \$1 million an hour is spent by companies selling soda, candy, chips and other unhealthy foods.⁴ Low-income communities also have less access to fresh, affordable and nutritious food furthering the problem.⁵ Underage drinking also increases when youth are exposed to alcohol ads.⁶ In fact, 1 in 5 California high school students drink 5 or more alcoholic drinks in a row per month.⁷

The Campaign

The **Healthy Stores for a Healthy Community** campaign is a statewide collaboration between tobacco use prevention, nutrition and alcohol prevention partners. The goal is to improve the health of Californians through changes in community stores and to educate people how in-store product marketing influences consumption of unhealthy products. Working together, we can make our community a healthier place and maintain a vibrant business community.

The Survey

Scientific surveys were recently conducted throughout California to assess product marketing and the availability of healthy and unhealthy options offered in stores that sell tobacco – **the first time** in California that tobacco, alcohol and food were analyzed together in stores. This is valuable information to help make the places we shop healthier.

More than 7,000 stores were surveyed in all 58 counties, which included convenience, supermarket, liquor, tobacco, small market, discount, drug and big-box stores. Approximately 700 individuals participated in gathering information statewide, including representatives from public health, community volunteers and youth.

WHAT WE KNOW...

	NEVADA	CA
% of adults who smoke (2011-12)	14.1%	13.8%
